Miniaturized proportional pressure regulator

PNEUMAX GREEN LINE: TECHNOLOGY & INNOVATION

General

Modern industrial applications constantly require more sophisticated and better performing pneumatic components . Flexibility and adaptability are key factor when designing a machine. The possibility to change the application parameter during operation such as for example the speed of a cylinder or the force generated by a rotary actuator are beneficial to the designer. In the past it was necessary to design complicated pneumatic circuits based on pneumatic logic elements which required a lot of space and complicated set up, today, thanks to the electronic proportional regulators such operations are extremely easy to achieve and offer even more flexibility.

Pneumax miniaturized proportional regulators series integrates all the main features of the 521 series with the exclusion of the display and analogue/digital output. High precision in pressure regulation, fast response speed, assembling options and reduced dimensions are the main advantages.

**N.B.: It is possible, upon request , to use specific subbases to mount the regulator on manifold.
It is also possible to use sub bases with 4mm push in fittings.
It is possible to produce the external feed back version.**
